

## Save our planet

Hi I'm Leah and I want to tell you a little bit about our rubbish separation today.

First of all, it can be said that throwing away garbage is the most stupid thing you can do. You should rather throw it in the garbage bin or take it back home than throw it on the ground.

In our school project, we collected waste and garbage in various communities such as Absam and Thaur. We cleaned the playgrounds and wooded areas around, and we were really shocked what we found there outside.

We found kilos of plastic and glass bottles thrown behind trees and bushes. All together, we found about eight large garbage bags, and this in only within a few hours. To get other people's attention, we were wearing warning vests and rubber gloves.

We have also been praised several times for how diligent we are and that it is great how we are helping the environment. We were very happy about that and of course we had a lot of fun to help, too.

The most frightening things we found, were two old damaged bikes and a rusted shovel.

I would like to say that all of us can help to save our planet and not always throw everything away in our oceans and forests. Otherwise there will be more plastic and rubbish than living animals soon.

So, take care of our environment because it's yours after all.
